Finding primes

Cheng Yu Liao

September 25, 2015

This is the code for finding primes and compositions which is usually difficult for people to differentiate. Consequently, I create the code in order to make the task easier.

Figure 1: People are writing python code through computer.

PYTHON CODE OF FINDING PRIMES

```
a=21
b="prime"

for x in range(2,a/2+1):
    if a%x==0:
        b="composite"
        break
print "the number is "+b
```

Set A =21
Set B=prime
Set X in range of 2 to A
And print the answer

```
the number is composite
```

The result of the python code
